

Management of Agricultural Waste for Sustainable Food Production

SUMMER COURSE ON FOOD SAFETY AND SECURITY, TEL AVIV
UNIVERSITY.
GROUP 6

Meili Wunierbiek ,Swapnil Pandey, Isaac Bisibe
Emmanuel Nyah,Nguyen Thanh Huyen,Sayan Basu

Agricultural waste

- The by-products of agricultural activities are usually referred to as “agricultural waste” because they are not the primary products.
- These wastes chiefly take the form of crop residues (residual stalks, straw, leaves, roots, husks, shells etcetera) and animal waste.
- Also includes harvest waste; fertilizer and pesticide runoff; Agricultural Industrial waste.

The PROBLEM

- Agricultural wastes are widely available, renewable and virtually free, hence they can be an important resource.
- However, many of the agricultural wastes are still largely underutilized, and left to rot or openly burned in the field, especially in developing countries.

Our Proposal

- We the representatives from China, India, Nigeria, Uganda and Vietnam are the first participants of the new United Nations committee: **Sustainable Agricultural Waste Management**
- (SAWM; *Origin: From Islam meaning Fasting*).

A decorative graphic in the top left corner consists of two overlapping diagonal shapes: a blue one in front and a light green one behind, both pointing towards the bottom right.

Our Mission

- To utilise the agricultural waste which is being unused in most countries.
- Reduce the environmental impact of agricultural waste.
- Find solutions which economically help the farmer, hence sustainable development.
- Educate farmers to the benefits of utilisation of the waste.
- Educate Policy makers on the urgent need of these policies.

Recycling agriculture system

Why recycling?

“recoverable resources”

Field Wastes
Weeds
Straws

Animal Wastes
Animal Dung
Dead Bodies
Horn

Agro-Industrial Wastes
Sugar cane: Molasses, Peels

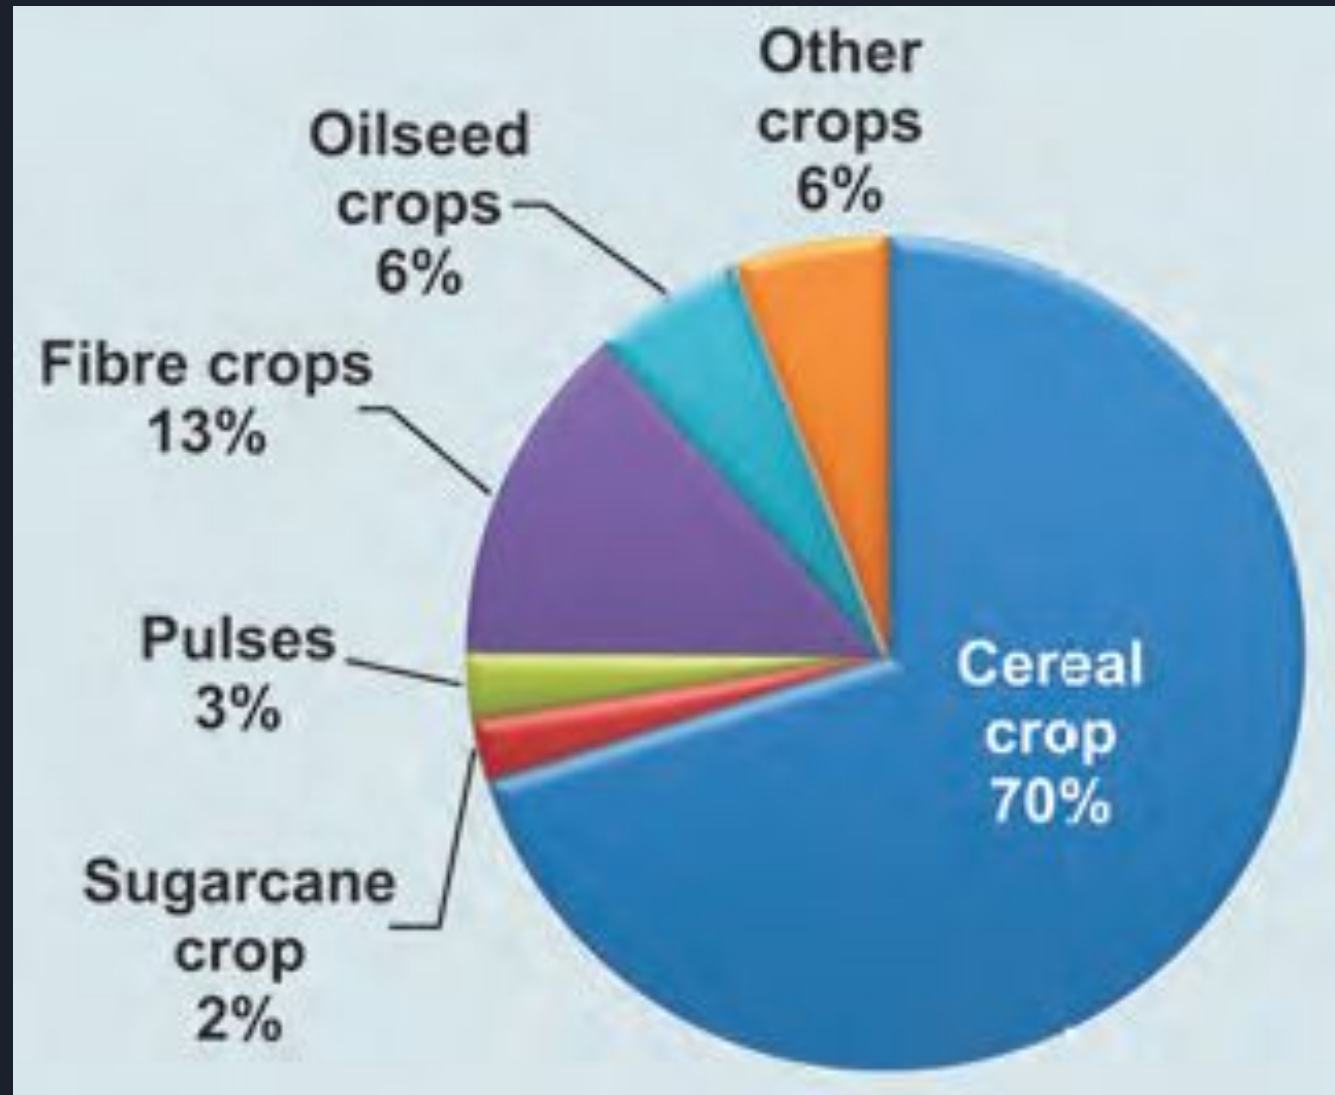

CROP RESIDUE

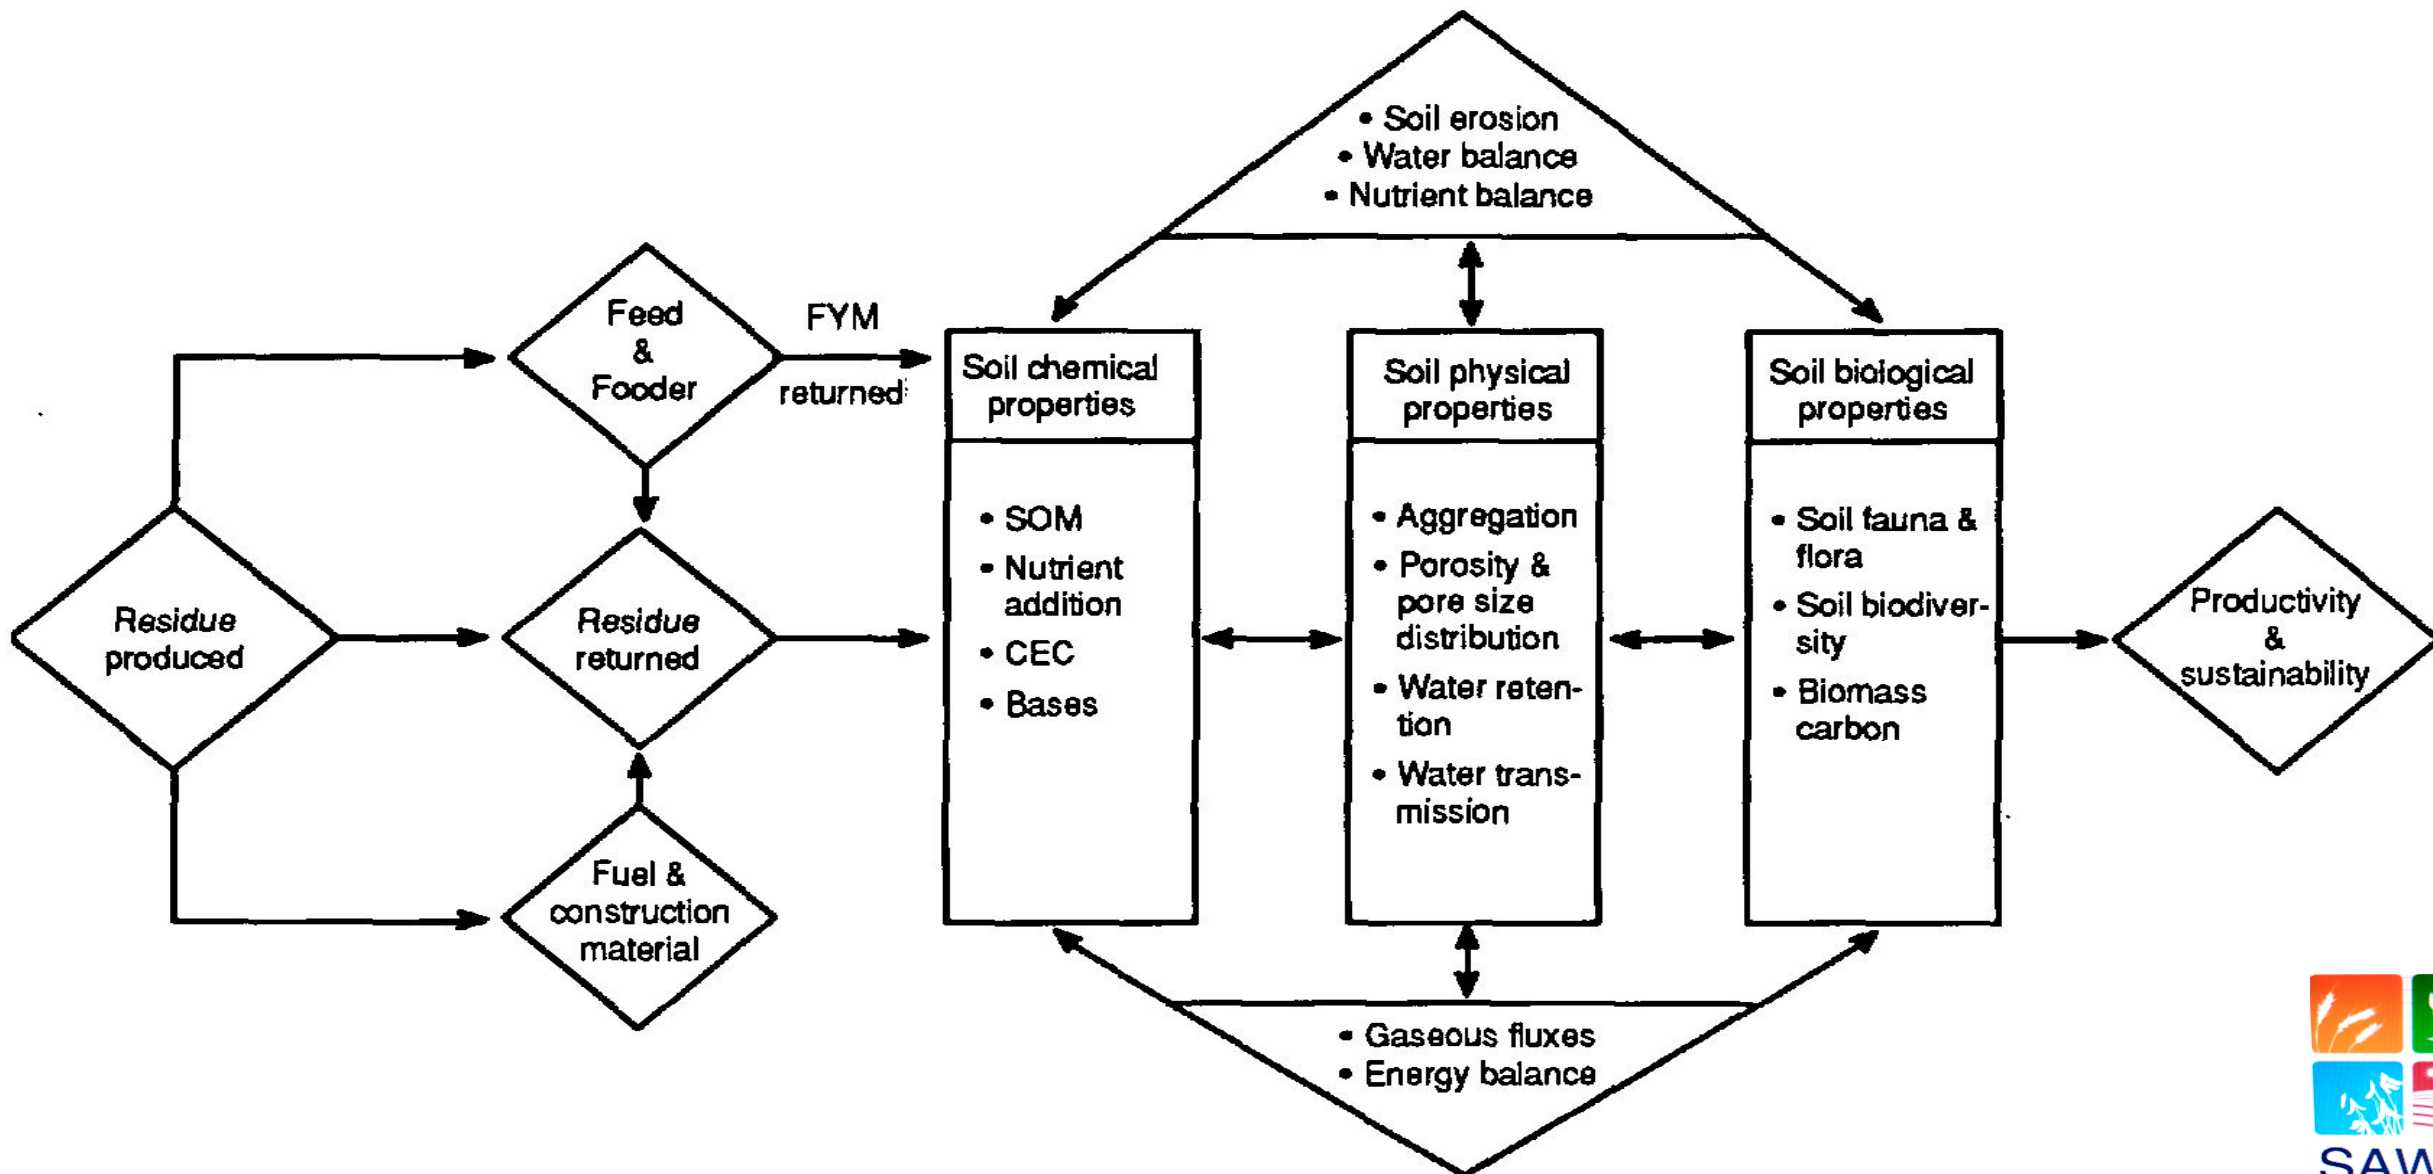

- Crop residues include the above-ground plant tissue (stems, leaves, roots, chaffs and other plant parts) remaining in the field after grains, tubers and other economic products have been harvested
- Returning crop residue and other organic wastes - positive and soil restorative effects - long-term basis (sustainable use of resources)
- The removal of crop residues leads to low soil fertility and thereby decreased crop production

Residue generation by different crops in India

CROP RESIDUE- Enhancing chemical, physical and biological properties

ANIMAL WASTE

- Animal waste comes from livestock, poultry, fishery, byproducts of meat processing industry and dairy production
- Animal wastes in the form of litter material, are available especially in urban centers and are an effective source of nutrients

MANAGEMENT PROCESSES

- **Collection-** Field, roadside markets, vegetable market
- **Transportation**
- **Treatment processes-** Composting, Recycling

COMPOST

- Compost is an organic matter that has been decomposed and recycled as a fertilizer and soil amendment
- Key ingredient in organic farming

NADEP Compost

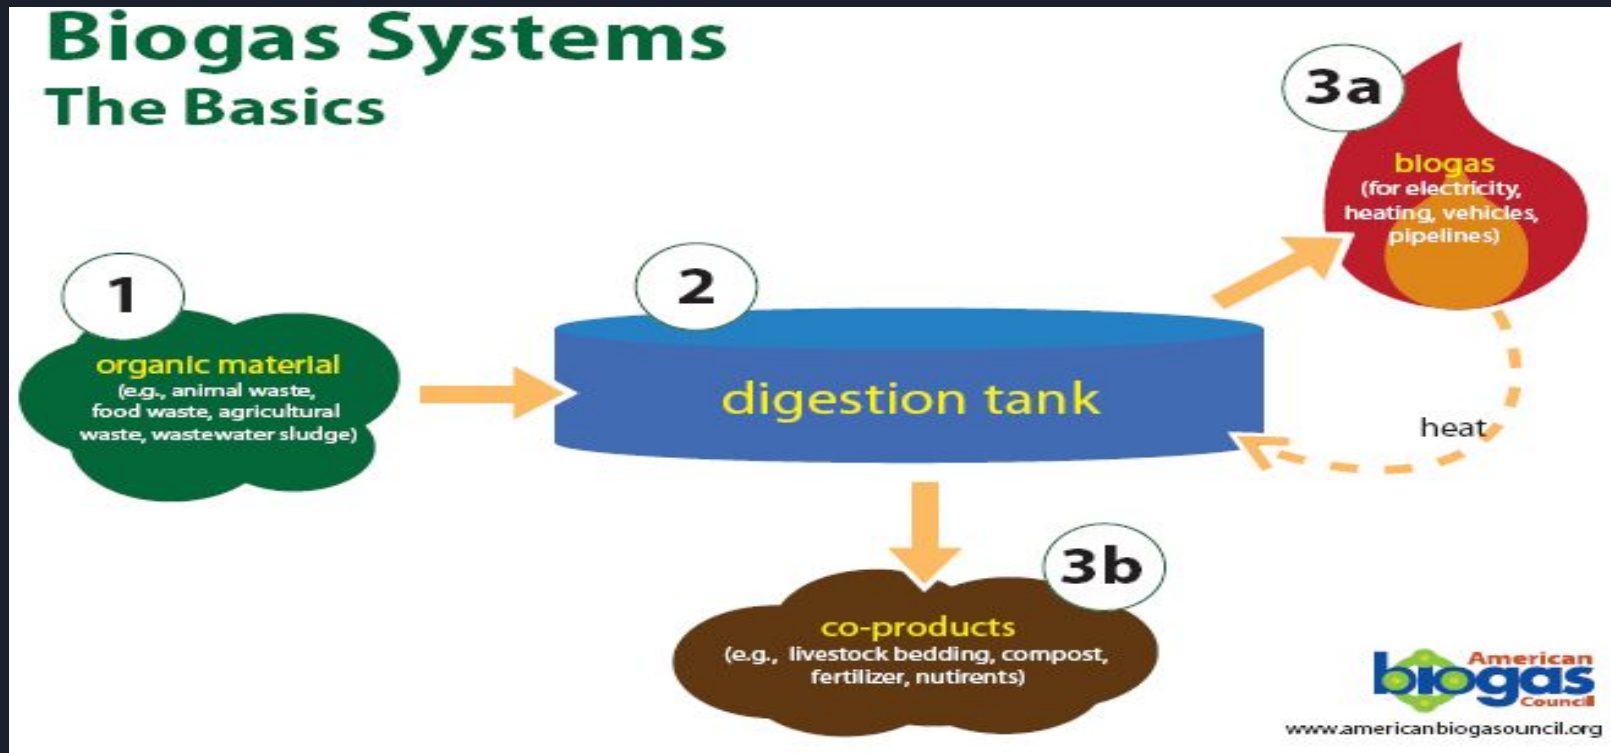

VERMICOMPOST

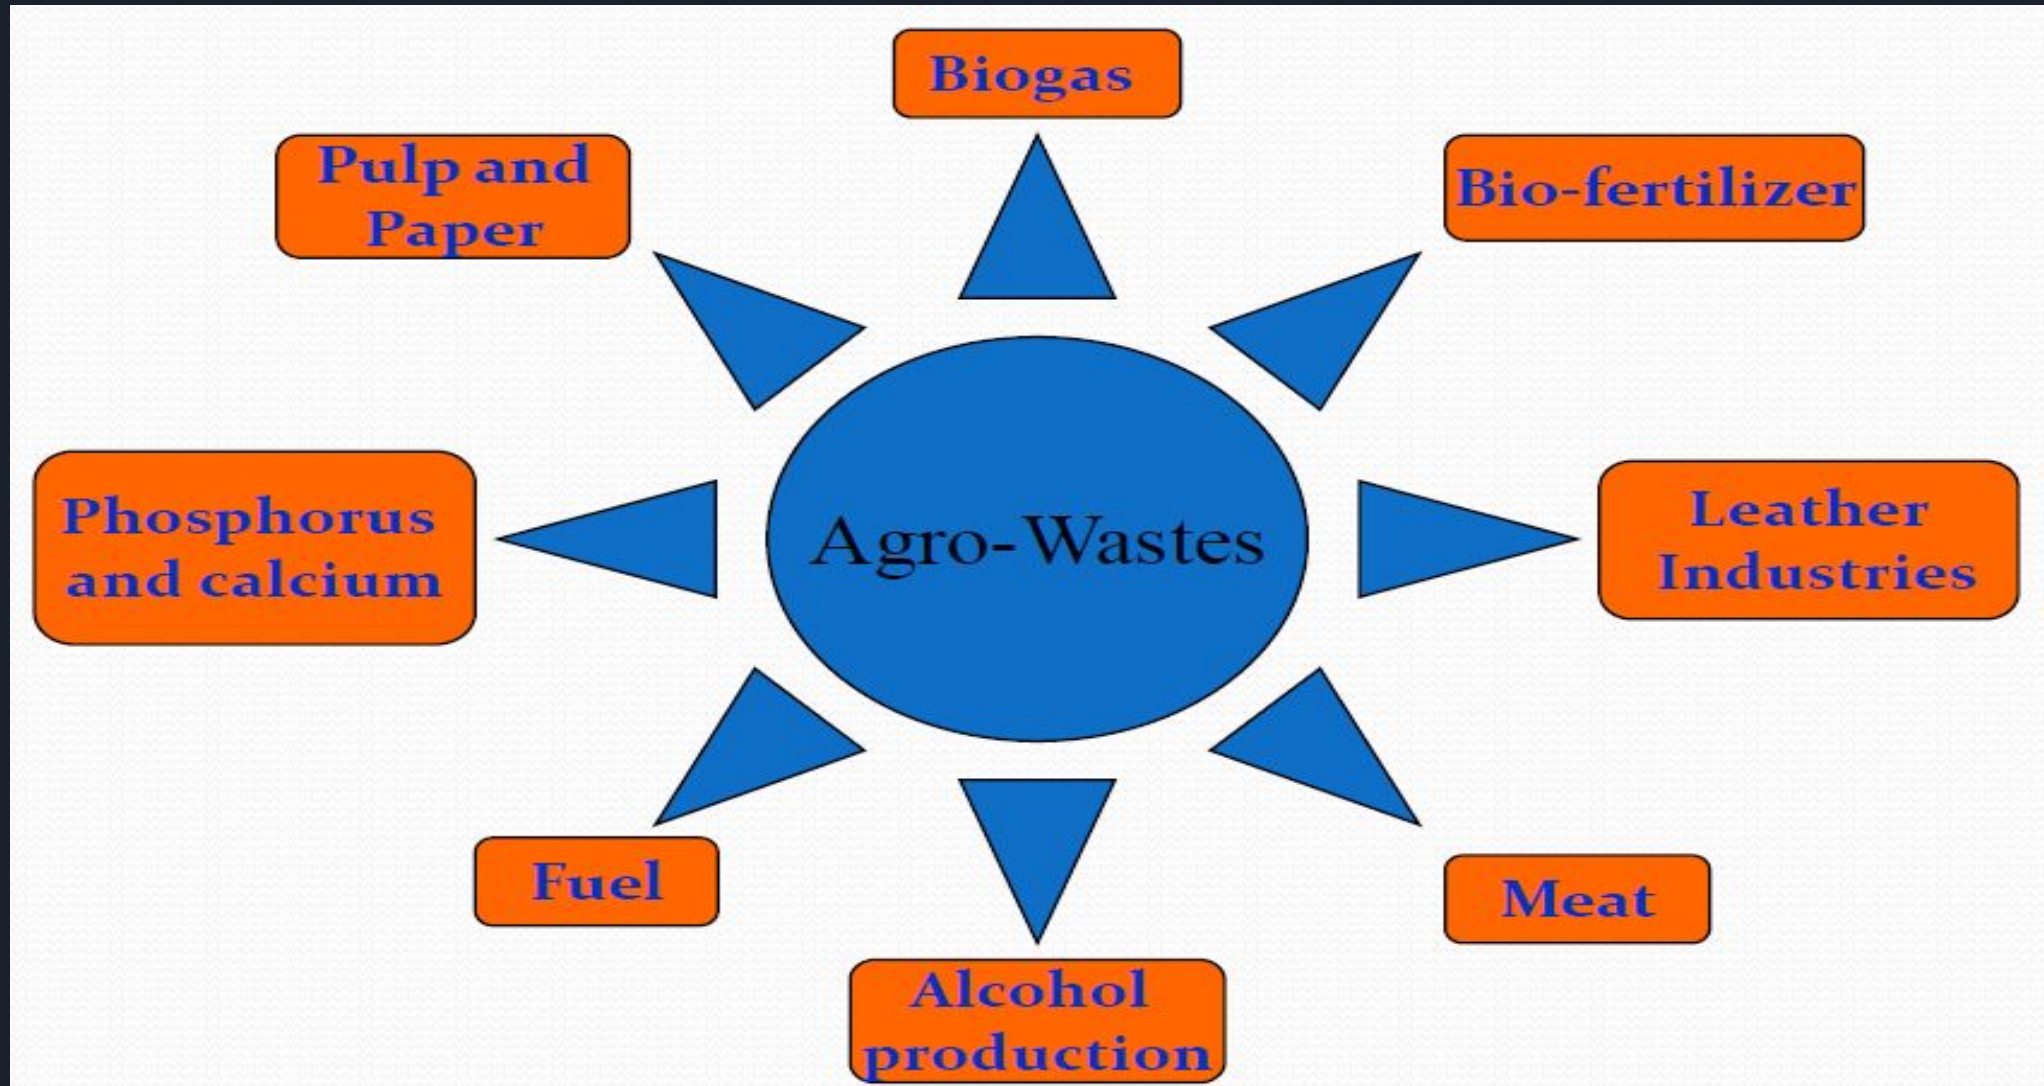

ANAEROBIC DIGESTION

- Series of biological processes - Microorganisms break down biodegradable material - absence of oxygen
- End products – Biogas and natural gas - fuel

Recycling agro-wastes

Bone utilization

Old animals

Bones

Bone Powder

Drugs

Animal Feed

Fertilizers

Phosphorus and calcium extraction

10-12
million
tons

2.5
million
tons

Crop residue after harvesting season

Contaminate atmosphere, harmful for people health

Why recycling?

Bagasse

Straws

Corns

Process

Flavor from the field

Future Prospects

- Biodiesel from all the energy potential of waste.
- Utilise it as animal fodder.
- Use of Oil Palm Shells as concrete.
- Bio Thermal Plants.
- Bedding Material for Cattle.
- Produce edible products from leftover raw materials
- Production of Organic compounds present in Plants (eg. Hemicellulose or Lignin)
- Mass Scale Education of Farmers and Policy makers.
- Create Tiers of countries with similar need of waste management, based on the urgency of implementation.

**SO WHICH COUNTRIES WOULD LIKE TO
JOIN SAWM?**

Just Raise your chit :)
